Outsourcing

Today, 30% "Vertical Measure Business" or "Internet Marketing Companies" are search engine optimization (SEO) outsourcing, and companies usually outsource SEO service since they do not want to pay wages regularly to their SEO professionals to complete SEO work, but want to pay for the entire project one time to an SEO Company.

It is a challenge to keep track of emerging technology and deploy it effectively to fuel your growth, outsourcing helps you manage this challenge . Kubic Technology is an ideal partner who can help you meet this ever growing challenge of integrating technology with your business needs.

Benefits of Outsourcing to Kubic Technology :-

Strong Project Management

We prepare a detailed time line as well as a series of activities, and use them to manage the entire project to make sure its completion timely. However, in the start of the project, our project manager officially outlines what, why, who, how, and when with a project beginning file so every team member can understand how the components of the project combine together.

Thorough Requirement Analysis :

A thorough requirements analysis before starting a project will surely considerably improve the quality of the product at the end. In web designing and development, the first step we take into action is a thorough requirement analysis because we have to understand the clients requirements in detail .we also make MOM (Minutes of Meeting) along with understanding on the clarifications, suggestions as well as assumptions on every project.

Constant Quality Monitoring :

It does not matter in which business industry you are in for us; we ensure you high quality and short delivery times with reliability. Our project team has enabled us to provide board project monitoring whenever our clients require it. Some of the major constant quality monitoring services include assure quality Evaluate technical solutions to keep your project on track regular and accurate project status information.

Engagement

"In the high business competitive world, customer support and engagement matter a lot since it builds trust, nurtures strong relationships with customers and clients, and provides a company a face with a voice."

Live Chat :

It is the best way to meet and talk with customers "face to face" without traveling. However, we use the skype in conjunction with a phone call that makes sure that we cannot loose audio even if we loose the video.

Email :

We email when our clients are able to talk to us and allow them proper response accordingly.

Phone :

We use phones when we need to talk on or handle sensitive concerns,so that we can clearly and directly communicate with clients.
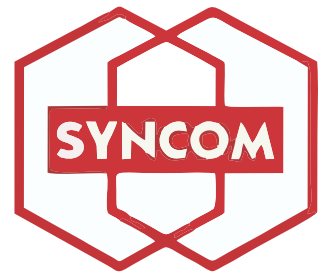

Social Forums :

We also communicate with client through social media. Social sites such as Facebook, Twitter etc, are best for pushing out information that clients can choose to read or just simply ignore.
Our Clients

"Customer satisfaction has always been the top priority for us that is what kubic technology all about. Hence the clients base is increasing day by day."
